

## 75% Of Workplace Crimes Are Committed By Employees And One Of Your Biggest Exposures Is Customer Credit Card Information.

If You Accept Credit Cards In Your Business This Statistic May Shock You ... But Ignoring It Could Cost You Hundreds Of Thousands Of Dollars And Possibly Even Jail Time.

Whatever you have for credit card processing now works fine for what it does. Our revolutionary, innovative technology sits in front of your processor to do all the other things that are missing. It literally locks down data and ensures you're protected from employee theft.

Here's 5 things we do to protect your business AND improve your profits:

1. Eliminate storing credit cards in file drawers, software, e-faxes, and everywhere else for improved PCI Compliance. Encrypted data resides on PCI Compliant servers so you can rebill your regular customers; reduce data entry needed to process customer transactions to just 3 SHORT FIELDS, including when the customer is NOT present. Go ahead, check and see how many fields are entered and how long it takes now.
2. Dynamically drive customers to use the type of cards that benefit you most, including offering automated discount incentives.
3. We can't change interchange rates, the bulk of your non-negotiable credit card processing fees, but we can influence your qualifying for lower rates. I don't care who your processor is, or what software or hardware you're using, I GUARANTEE you cannot do this now.
4. Assign every payment to your own specific accounting codes, including breaking a single transaction to multiple codes, or assigning by location or employee (doctors, lawyers), for simple integration to your accounting system.
5. Dynamic real-time reports, including automated report creation and email delivery, on every financial aspect you ever dreamed.

**Not only can we do these FIVE things better, we can do FIFTY more.**

Don't Wait. Get What Every Business Owner Needs to Protect Them From Jail, Overpaying, And Employee Theft When Accepting Credit Cards. A Small Theft Of Just A Few Cards Can Cost Over \$27,000, Not Including Lost Business From A Damaged Reputation And Possible Jail Time.

### Why do I need hosted payment processing?

- Eliminates issues that cause higher credit card processing costs, including human error, and hardware/software limitations.
- Flexible, scalable, hierarchy with real-time data and dynamic reporting, to see payment data in the format and groups you need.
  - Reduces internal and external fraud risk.

### How quickly can I implement?

How quickly do you need it? From initial consultation to processing, you can be live within days. Users can process orders within minutes of viewing 15-30 second video training clips.
